I agree – we can design a little report and include requirements with TOs. Also – if someone is willing to go through off-site disposal reports and design a spreadsheet – think Adam started something --- thanks

I think we need to talk about this because I don't think RCMS is capturing the detail that we need to be able to produce a IGCE that is acceptable to Contracts at this time. I think we need to get a group together to discuss.

Thanks

We can add requirements to task orders to collect information – we can develop a format so we are getting it in the same format each time-- thanks

JoAnn:

Should we start asking for a report from the contractor after they complete their cleanup actions that is similar to a T&D report but is more of a subcontract report except for team subs. We could get the information we for cost estimation through this unless we have determined a better way to get the information.

Thanks
